Ronan & Erwan Bouroullec, 2006/2015

## Alcove

The 'room in a room' is a concept that Vitra has intensively pursued over many years in collaboration with the designers Ronan and Erwan Bouroullec. The idea of mobile micro-architectural elements has led to a wide variety of designs, among which the Alcove Sofa stands out as one of the most remarkable.

The various Alcove sofas were conceived for open-plan offices, where they provide sheltered, private spaces in busy or hectic surroundings. This makes them a perfect place to withdraw for concentrated work or small meetings.

The different models in the Alcove family can be variably combined, thus offering a diverse range of possibilities for organising open-plan offices without having to install fixed structures. This enables the creation of cohesive central areas in open office environments – Meet & Retreat zones with a unified aesthetic.

### Ronan & Erwan Bouroullec

The brothers Ronan and Erwan Bouroullec live and work in Paris. Their oeuvre ranges from small everyday objects to architectural projects. They have worked with Vitra since 2000 and have contributed numerous designs to both the office and home collections.

## ACOUSTICS

The quilted side and back panels are a distinguishing characteristic of the various sofas in the Alcove family, helping to shield sitters both visually and acoustically and creating a sense of calm and privacy. The thin panels enable an efficient use of space while inviting users to lean against the softly padded surface and enjoy their flexible support.

Thanks to the uniform widths and depths of the various products in the Alcove family, they are easy to integrate in the planning of spatial layouts.

Alcove Lounge upholstery

Alcove Work upholstery

The soft 'Lounge' upholstery offers a relaxing place to sit, enhanced by arm cushions and small back pillows for even greater comfort (seat height 485 mm, 325 mm with applied load).

'Work' upholstery is firmer, providing sufficient support for working in a comfortable upright posture (seat height 480 mm, 385 mm with applied load).

### Lounge upholstery

Lounge upholstery has a frame with elastic webbing to provide relaxed sitting. The seat cushions consist of polyurethane foam and polyester fibre; the back cushions are filled with polyurethane chips and microfibre.

### Work upholstery

Work upholstery has firmly padded seat and back elements that jointly form a comfortable seat for table-oriented postures and working tasks. The seat cushion rests on a metal frame with an integrated MDF panel; like the backrest, it consists of polyurethane foam and polyester fibre.

### Alcove Plume Contract upholstery

The plush cushions of Alcove Plume are slightly rounded to offer the soft, casual comfort of a lounge sofa (seat height 410 mm, 310 mm with applied load).

### Alcove Plume Contract upholstery

The Bonell spring core is sheathed in a textile fibre-composite mat and covered with layers of polyurethane foam in different densities to provide excellent comfort. The seat modules are supported by MDF base panels. The back cushions are composed of polyurethane foam and polyester fleece.

# Alcove, Alcove Highback, Alcove Xtra High Sofa

**vitra.**

Ronan & Erwan Bouroullec, 2006/2012

Alcove Love Seat, Alcove Xtra High Two-Seater and Alcove Highback Three-Seater

A sofa can go beyond being a mere piece of furniture to become a room within a room.

This was the idea that inspired Ronan and Erwan Bouroullec in their design of the Alcove Sofa.

With its comfortable seat and backrest upholstery and the high, flexible side and back panels, the Alcove Sofa forms the basis for the entire Alcove family.

The fundamental concept behind the Alcove product line – creating places of shelter and seclusion – is especially evident in the Alcove Highback Sofa. With

its high side and back panels, the Alcove Highback Sofa shields users both visually and acoustically from the surrounding environment. It offers a space for withdrawal and privacy. Thanks to the excellent acoustic qualities and its function as a visual screen, the Alcove Highback Sofa provides a truly peaceful oasis. This effect is even more pronounced when two sofas are positioned across from each other to form a room-like space.

The Alcove Xtra High Sofa has extremely high side and back panels that further amplify the function of protective enclosure common to all Alcove models.

## Materials

- **Structural frame:** tubular steel, chrome-plated or powder-coated (smooth); metal frame with upholstery webbing (lounge upholstery) or MDF base board (work upholstery).
- **Body:** back and side panels with integrated MDF boards for structural support, panel sections connected with zip fasteners.
- **Upholstery/seat:** polyurethane foam and polyester fibre. Alcove sofas come in two different upholstery versions: soft 'lounge upholstery' for relaxed sitting and firmer 'work upholstery' for work-oriented sitting with various seat heights. Lounge upholstery = 485 mm (measured according to EN 1335-1 = 325 mm), work upholstery = 480 mm (measured according to EN 1335-1 = 385 mm).
- **Covers:** removable.
- **Back cushions and cushion set:** polyurethane chips and microfibre filling. The cushion set is sold separately.
- **Legs:** tubular steel, chrome-plated or powder-coated (smooth).
- **Alcove Love Seat:** incl. 1 back cushion.
- **Cushion set for Love Seat:** 2 armrest cushions and 1 small back cushion.
- **Alcove two- and three-seater:** incl. 2 back cushions.
- **Cushion set for two- and three-seaters:** 2 armrest cushions and 2 small back cushions.

## Alcove Plume Contract Two-Seater, Alcove Plume Contract Highback Fauteuil and Alcove Plume Contract Highback Three-Seater

Alcove Plume Contract dispenses with visible legs and an external tubular steel frame, which emphasises its reductive design and almost makes it appear like a minimalist sculpture. As cubic architectural elements in two different heights, the various models of this sofa can be used to structurally organise an interior space. In contrast to their emphatically linear contours, they offer the soft comfort of a lounge sofa and bring a sense of cosiness to offices and public

areas. Alcove Plume Contract Highback, in particular – due to its high back and side panels – creates an inviting place to withdraw, while two facing sofas form a comfortable meeting area.

### Materials

- **Structural frame:** powder-coated steel, no external tubular frame.
- **Back and side panels:** integrated MDF panels for structural support; panel elements connected by zip fasteners.
- **Seat cushion:** multilayer PU foam upholstery with Bonnell spring core. The seat cushions can be individually detached and the fabric seat covers are removable. Seat height 410 mm (measured according to EN 1335-1 = 310 mm).
- **Back cushions:** filled with PU foam and PE fleece.
- **Legs:** tubular steel, chrome-plated or powder-coated (smooth).

## Alcove Highback Work

The fundamental idea behind the Alcove product family - providing places of shelter and seclusion - also applies to Alcove Highback Work: it shields users both visually and acoustically from the surrounding environment, forming a space for withdrawal. With its integrated tablet desk, storage box and cable inlet, Alcove Highback Work offers a flexible and private workspace in the open-plan office for individual tasks requiring concentration.

### Materials

- **Structural frame:** tubular steel, chrome-plated or powder-coated (smooth), metal frame with MDF panel.
- **Body:** high back and side panels form a visual and acoustic shield, integrated MDF boards for structural support, panel sections connected with zip fasteners.
- **Seat and back cushions:** polyurethane foam and polyester fibre. Work upholstery for work-oriented sitting, 480 mm (measured

according to EN 1335-1 = 385 mm).

- **Box:** MDF carcass covered in polyurethane foam.
- **Legs:** tubular steel, chrome-plated or powder-coated (smooth).
- **Tablet desk:** two bonded MDF panels, covered in leather.

## Alcove Cabin Xtra High Two-Seater and Alcove Cabin Highback Two-Seater

Alcove Cabin creates a secluded space, which is enclosed on all sides and accessible through a single opening. It provides visual and acoustic privacy for four to six people – especially the version with extra-high side walls. On the inside, Alcove

Cabin has facing upholstered seats and can be optionally equipped with a table, power connections and lighting to serve as a full-fledged workspace.

### Materials

- **Structural frame:** tubular steel, chrome-plated or powder-coated (smooth), metal frame with MDF panel.
- **Body:** back and side panels with integrated MDF boards, connecting panel with integrated MDF board and metal structure, panel sections connected with zip fasteners.
- **Upholstery/seat and backrest:** polyurethane foam and polyester fibre. Work upholstery for work-oriented sitting, 480 mm (measured according to EN 1335-1 = 385 mm).
- **Covers:** removable.
- **Legs:** tubular steel, chrome-plated or powder-coated (smooth).
- **Table top:** powder-coated MDF, oak veneer.
- **Table leg:** tubular steel, chrome finish.

## Alcove Highback System

Alcove Highback System elements can be combined to form individual configurations of a great range of shapes and sizes. The modular system is made up of three different elements: corner sections, middle sections and side sections (right

and left). These allow the formation of sofa clusters that are perfectly tailored to the needs of each setting – whether it is an office, lobby, reception or waiting area.

### Materials

- **Structural frame:** tubular steel, chrome-plated or powder-coated (smooth), metal frame with upholstery webbing.
- **Body:** high back and side panels form a visual and acoustic shield, integrated MDF panels for structural support, panel sections connected with zip fasteners.
- **Upholstery/seat:** polyurethane foam and polyester fibre. Lounge upholstery for relaxed sitting, 485 mm (measured according to EN 1335-1 = 325 mm).
- **Back cushions and cushion set:** polyurethane chips and microfibre filling. The cushion set is sold separately.
- **Covers:** removable.
- **Legs:** tubular steel, chrome-plated or powder-coated (smooth), levelling adjustment.

**Laser**100% Trevira CS polyester | 520 gr/m<sup>2</sup>

Laser is a sturdy and striking cover fabric with a distinctive woven structure. Easy to care for and durable like sportswear, the fabric is also highly abrasion-resistant. The economical Laser fabric can also be utilised in office environments.

Laser is available in 35 colours.

**Laser****Laser**

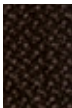

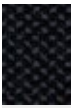

**Credo**

95% new wool, 5% polyamide | 640 gr/m<sup>2</sup>

Credo is a durable woollen fabric made of premium worsted yarn with a pleasant feel. The two- and three-tone colours give this fabric a characteristic structure and vibrant appearance. Credo allows for an effective exchange of heat to ensure comfortable thermal conditions for the sitter. The fabric can also be used in office environments.

Credo is available in 12 colours.

## Volo

85% new wool, 15% polyamide | 435 gr/m<sup>2</sup>

Volo is a finely structured wool blend with a refined weave that gives it an elegant appearance. This expressive textile shows strong solid colours to full advantage while simultaneously offering pleasant tactile qualities. With its soft look and appealing texture, Volo is a perfect fit for home interiors, but it is also well suited for use in the contract sector.

Volo is available in 17 colours.

## Volo

## Tubular steel frame

Vitra has over fifty years of experience in the production of upholstered furniture. Premium materials, skilled craftsmanship and high quality standards at Vitra are a guarantee for long-lasting products. In Vitra's own test centre, our upholstered furnishings are regularly subjected to rigorous tests that far exceed common standards.

### Care instructions:

Exposure to direct sunlight should be avoided, since ultraviolet rays can cause cover materials to fade.

To retain the original fullness and shape of your sofa, cushions should be regularly shaken and plumped.

Folds and creases from sitting can be prevented in all types of upholstery by smoothing the cover material after use.

## USEFUL FACTS ABOUT COVER MATERIALS

Cover fabrics have a decisive influence on the appearance and characteristics of upholstered furniture. Technical properties such as resistance to abrasion, fading or stains play an important role, along with the quality of fibres, weaving technique and aesthetic features of the textile.

Function and performance are primarily determined by the type of fabric used. In general, synthetic fibres are superior to natural fibres in terms of their technical characteristics. For this reason, blends of different materials are employed to combine the advantages of the individual fibres.

In the following, you will find some of the key features of the textiles used by Vitra in its upholstery covers:

### Cotton (CO)

Skin-friendly natural fibre of plant origin, pleasant tactile qualities, readily absorbs moisture. Often inferior to synthetic fibres with regard to colourfastness and light resistance; flat weaves susceptible to pilling.

### Linen (LI)

Natural fibre of plant origin with slight lustre, cool and comfortable, repels dirt, no pilling. Limited colourfastness to light and crocking, creases easily.

### Wool (WO)

Elastic natural fibre of animal origin, naturally self-cleaning – a brief airing disperses absorbed odours, leaving the wool smelling neutral and fresh again. Good resistance to light and abrasion, highly absorbent, minimal creasing, low flammability. Subject to pilling and matting.

### Polyester (PE), Polyacrylic (PA), Viscose (VI)

Synthetic, highly uniform, lightfast fibres. The non-absorbent properties of synthetics can be mitigated with fibre blends and weaving techniques.

The overall look of a piece of furniture is influenced by the colour and type of cover fabric, its properties (elastic or non-stretch) as well as the upholstery technique (removable or attached covers). Consequently, a sofa can take on a different appearance depending on the cover material. Generally speaking, cover fabrics with some elasticity are less susceptible to creases and puckering, since they have an adaptable fit on three-dimensional forms. Heavier cover materials such as Over, Laser or Credo drape more smoothly, while thinner materials exhibit a finer rippling effect.

### Care instructions:

All Alcove covers are removable. Fabric covers can be professionally dry cleaned. Prior to treatment, please be sure to note the material composition of the cover fabric.

Should you ever need to replace individual parts or covers due to wear and tear, please contact your local Vitra retailer.
